

DOG PICK UP BAGS

The Good, Bad & Ugly!

Plant-based plastics are the future for single use for doggy doo! **No bags is even better!**

Super Good

Find a re-useable container to scoop and carry dog poop to your home compost, loo, or organics pick up service

Good

Bio-based bags made from organic renewable sources (eg organic waste or corn, rice and wheat crops) and if certified compostable, break down easily and quickly into water, carbon and humus.

Bad

Fossil-based bags are made from non-renewable materials. Their very rigid polymer chains take many years to break down, meanwhile contaminating soil.

Ugly

Oxydegradable bags have a huge negative environmental impact, are oil loving which attracts toxins to attach to them, they're now banned in many countries.

Certified Compostable - a standard for disintegration amount & time, biodegradation amount & time, no heavy metal or fluorinated chemicals & no plant toxicity or soil invertebrate toxicity.

In landfill, dog poop in compostable bags lack oxygen and moisture to breakdown rapidly!
